

# SecurityServer 4.21 Built-in Elliptic Curves

## 1 SecurityServer 4.21 Elliptic Curves

SecurityServer 4.21 offers a collection of built-in Elliptic Curves. Each curve is specified by its domain parameters and identified by a name. The following table lists all built-in Elliptic Curves by their name, denotes the bit size of their domain parameters (i.e. the key size) and references the specification where the respective curve and its domain parameters are defined.

Elliptic Curve calculations are implemented in firmware on CryptoServer CSe-Series models CSe10 and CSe100, and on Se-Series models Se12 and Se52. On CryptoServer Se-Series models Se500 and Se1500 numerous common Elliptic Curves are implemented in hardware while other less common Elliptic Curves are implemented in firmware. Elliptic Curves that are implemented in hardware on CryptoServer Se-Series models Se500 and Se1500 are marked by a ✓ in the last column of the table below.

Name	Size	Reference	HW implementation on Se500 / Se1500
secp112r1	112	[SEC2]	✓
secp112r2	112	[SEC2]	
sect113r1	113	[SEC2]	
sect113r2	113	[SEC2]	
secp128r1	128	[SEC2]	✓
secp128r2	128	[SEC2]	
sect131r1	131	[SEC2]	
sect131r2	131	[SEC2]	
brainpoolP160r1	160	[BP]	✓
brainpoolP160t1	160	[BP]	✓
secp160k1	160	[SEC2]
